LIVING ARCHITECTURE MAPS

Navo

Your architecture, alive.

Navo turns a simple file in Git into an **interactive map and wiki of your systems**: always current, browsable by anyone, and readable by your AI assistants.

Self-hosted | Unlimited viewers | Desktop app

THE PROBLEM

Nobody has a current picture of how your systems fit together.

- Architecture lives in slides and dies in Confluence.
- Only two people really know how the platform fits together.
- Developer portals like Backstage can take months and a dedicated platform team.

WHAT WE DO

One source of truth in Git, rendered as a living map.

Describe services and connections in a simple file, or import existing Lucidchart, draw.io and Mermaid diagrams and scan code to get started. Navo checks it, then publishes a map and wiki that anyone can explore and that changes through normal code review.

HOW IT WORKS

Describe
Write it, import diagrams or scan code

→

Validate
Checked automatically before merge

→

Publish
Private site inside your network

→

Explore
Map, wiki, and AI assistants

WHAT YOU GET

Faster onboarding
New engineers learn the platform from today's map, not last year's slides.

Changes reviewed like code
Architecture updates go through pull requests, so the map never drifts.

AI that knows your real systems
Coding assistants query the same map people browse, instead of guessing.

Minutes, not months
A focused browser, not a full developer portal to build and staff.

WHY US

- **Git stays the source of truth.** No second database to maintain.
- **No platform team required.** Runs as a simple, locked-down site, even fully private.
- **Unlimited free viewers** on every plan; you pay only for editors.
- **Signed desktop app** for quick starts, private team deployments for scale.

WHO IT'S FOR

- Platform & architecture teams
- CTOs & engineering leaders
- Teams leaving Lucidchart or Confluence
- Regulated & private networks
- Teams adopting AI assistants

Give everyone the same map of your systems.

Explore live demos, or talk to us about a private team deployment.
