STATE OF GOOD REPAIR FOR YOUR DELIVERY ESTATE

See which teams can deliver. Fund the right work.

Vorsam gives leaders **one live picture of work, capacity, dependencies and risk across every team** (Agile or not), so you can rank investment on facts instead of status meetings.

VORSAM

- **Inventory** — Every team, owner and system of record
- **Condition** — Who is healthy, stretched or stuck
- **Ranked work** — What to fund inside real capacity

THE PROBLEM

A few teams are visible. The rest are a black box.

- No single register of teams, owners, tools and work in flight.
- Cross-team dependencies and over-allocated people surface only after a date slips.
- "Everyone must go Agile first" stalls the program before it starts.

WHAT WE DO

Treat delivery like any critical asset: inventory, condition, ranked work.

Vorsam connects to the tools teams already use (Azure DevOps today, Jira coming soon, or Vorsam's own boards) and rolls everything into one view. Scrum, Kanban, waterfall and operations teams all fit. Your asset and service-management systems stay exactly where they are.

THE GOOD-REPAIR LOOP

1. **Inventory** — Register every team, service and owner
2. **Assess condition** — Work in progress, capacity, blockers, risk
3. **Rank the work** — Roadmap ordered by priority and real capacity
4. **Report** — Leadership and board-ready summaries

WHAT YOU GET

One view for leadership
Executives, PMOs and teams see the same live picture of capacity, dependencies and risk.

Dates you can defend
Forecast delivery from real history and see how a priority change moves the timeline.

Collisions caught early
Dependency maps and over-allocation alerts flag trouble before it hits production.

Ask SAMi, in plain English
"Why is this late?" gets a data-backed answer. SAMi also drafts epics and features in seconds.

WHY US

- **No methodology religion.** Meet teams where they are, then improve the ones that need it.
- **Secured AI**, self-hosted inside your network with Microsoft Entra ID sign-in.
- **Sits beside your systems of record**; it does not replace asset or service management.

WHO IT'S FOR

- CIOs & VPs of Engineering
- PMOs & portfolio leads
- Release Train Engineers
- SAFe programs
- Public agencies & infrastructure operators

Any organization running many teams on mixed tools and methods that needs one honest view of delivery health.

See your whole delivery estate in one view.

Book a demo and we'll map your first teams with you.
